October 9th 1919

Messrs Barber & Ross
11th & G Streets N.W.
Washington D C

Gentlemen:

The "Little Wonder" mixers used on our \$2,000,000
Meridian Hotel, No 2400 Sixteenth Street, performed
their work in a most satisfactory manner, both for
concrete and mortar.

During the many years we have been in the building
business we have had experience with quite a number
of different makes of mixers and we do not hesitate
to say that the "Little Wonder" has proven to be the
most satisfactory of them all.
It is the best we know of.

Very truly yours,

KENNEDY BROS.

Gentlemen:

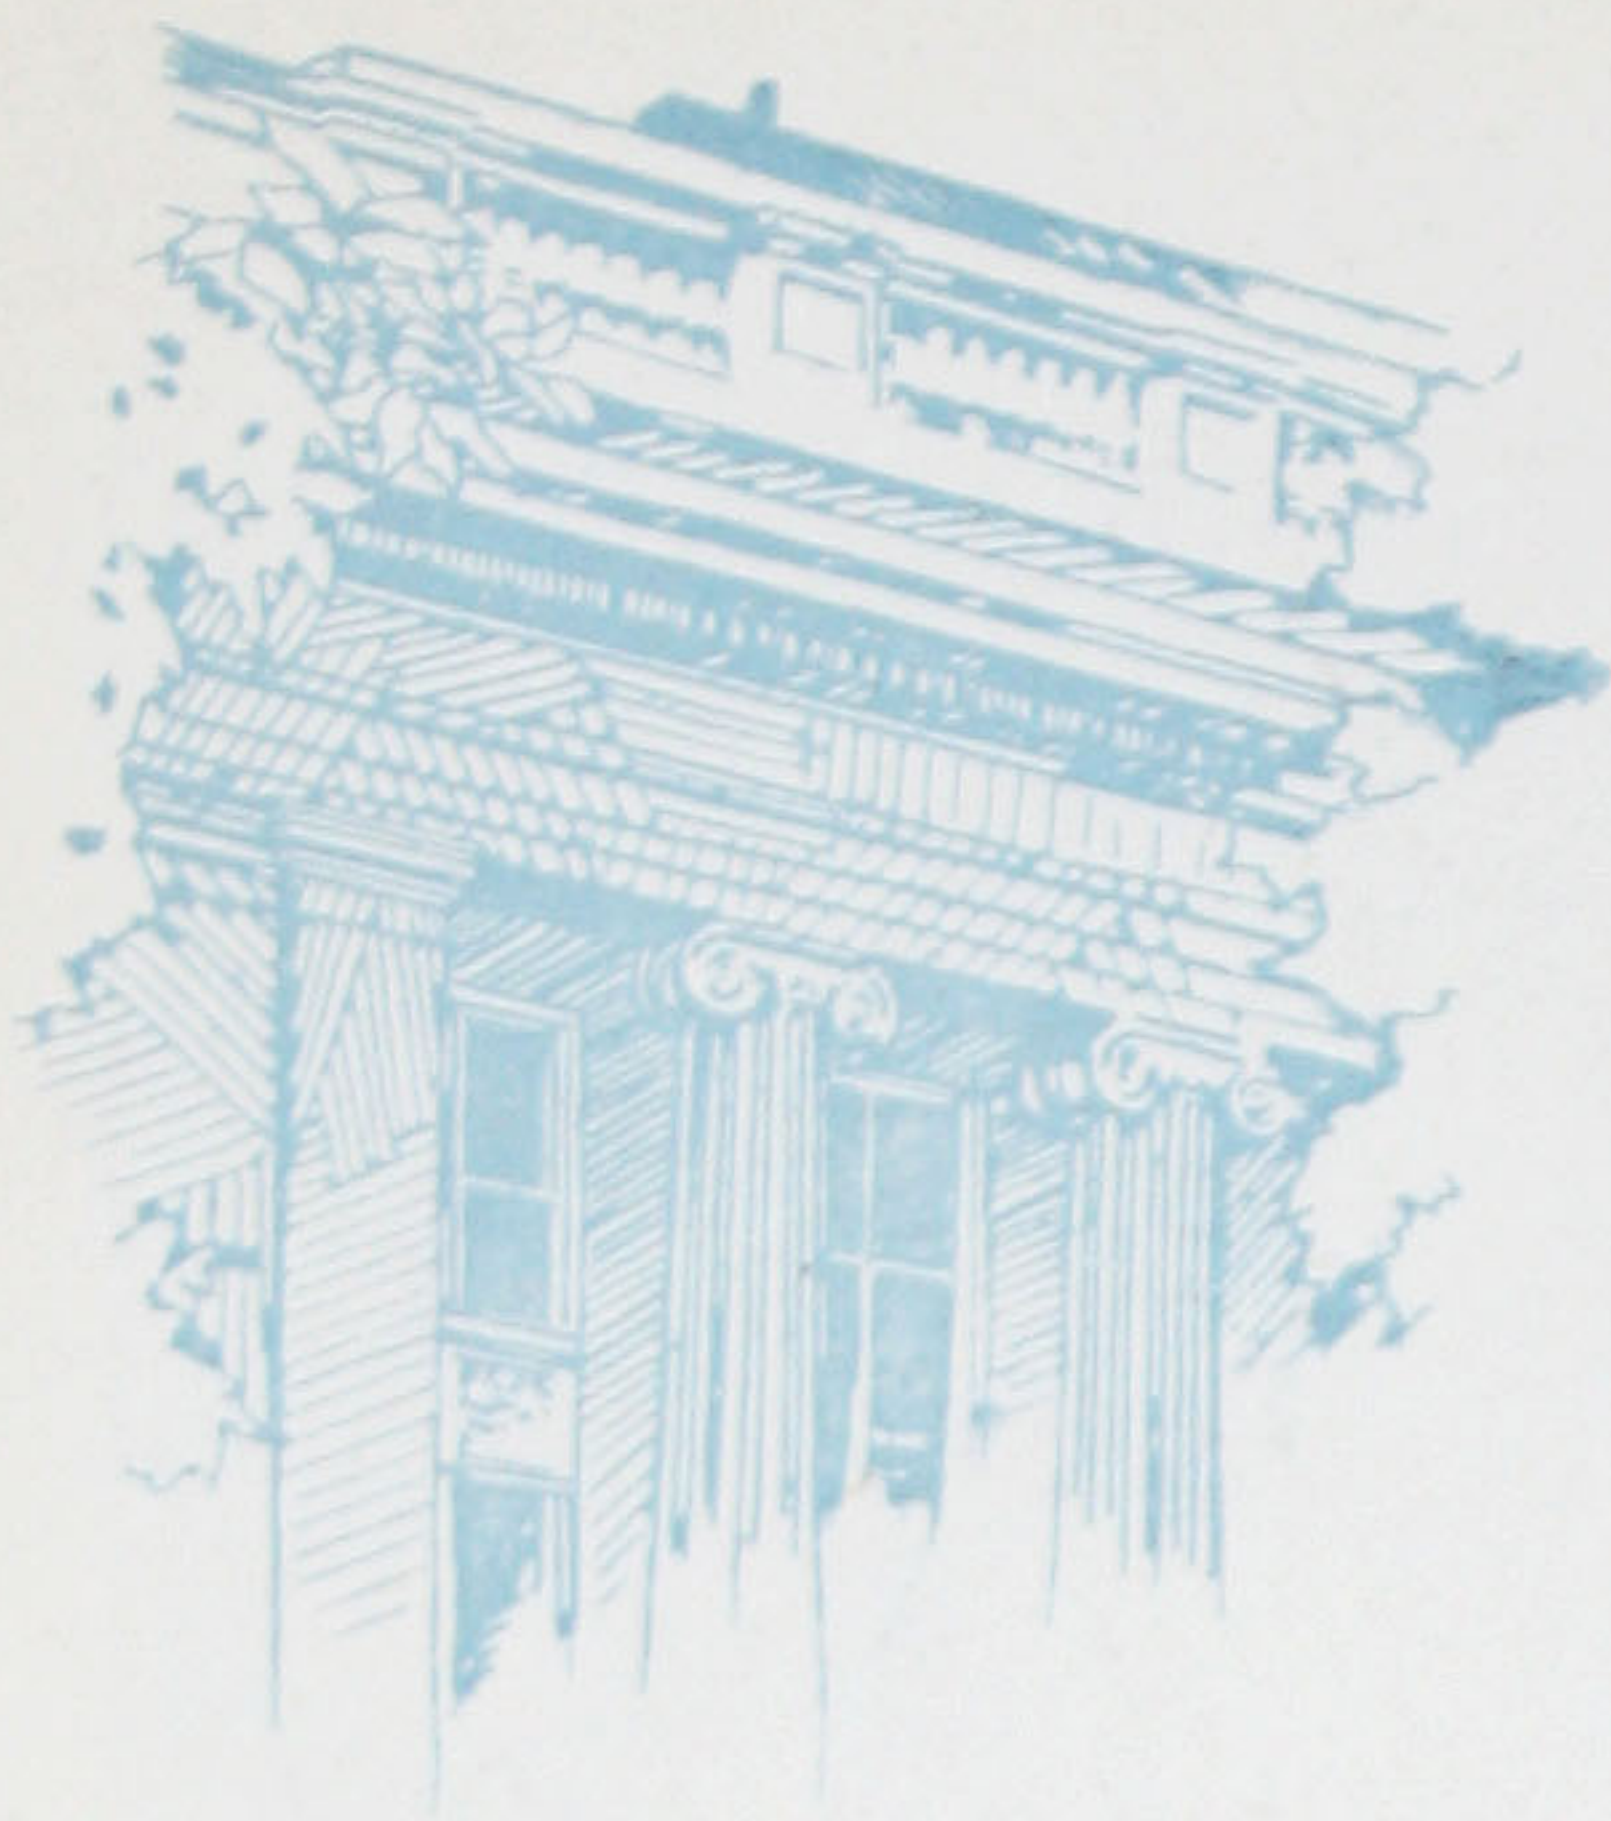

In the manufacture of our highly developed concrete products and in the surface treatment, by the "Earley Process", of reinforced concrete and stucco it is essential that not only the ingredients themselves but also every step of the process be under complete control. One of the most important factors in our process is the mixing of the materials, another the cleanliness of the mixer. And because of the importance which we attach to these factors we chose, for our work, a mixer which permitted us to observe the mixing of the materials at all times and which could be positively cleaned: Therefore, visibility and cleanliness were the two features in the design of Wonder Mixers which induced us to adopt them for both our field and laboratory work.

Very truly yours

John J. Earley

Waterloo Construction Machinery Company,
Waterloo, Iowa.

Gentlemen:

We have used four Little Wonder Mixers continuously in the construction of many buildings of all kinds for a period of three years and have found them satisfactory in every respect.

All four machines are operating as well today as when purchased and we might add they have given us very little trouble with a very reasonable cost for upkeep.

We do not hesitate to say that we have found them the most economical and convenient piece of mixing machinery we have ever used.

The mixing of plasterers' mortar is one accomplishment of the Little Wonder that stands out very prominently on our work. In the beginning the plasterers were very much opposed to using any kind of portable machine for mortar mixing. Now they object seriously to using hand-mixed mortar.

The very satisfactory service maintained by your local representatives, Barber and Ross, in furnishing advice and spare parts very promptly has reduced our operating troubles to almost nothing.

We are always in a position to back what we say about Little Wonder Mixers by a working demonstration in either concrete, bricklayers' mortar, or plasterers' mortar, as our machines are always in operation in this work.

Respectfully,

Harry Wardenman

ESTIMATES CHEERFULLY FURNISHED

WASHINGTON, D. C., October 6, 1919.

Waterloo Construction Machinery Co.,
Waterloo, Iowa.

Gentlemen:-

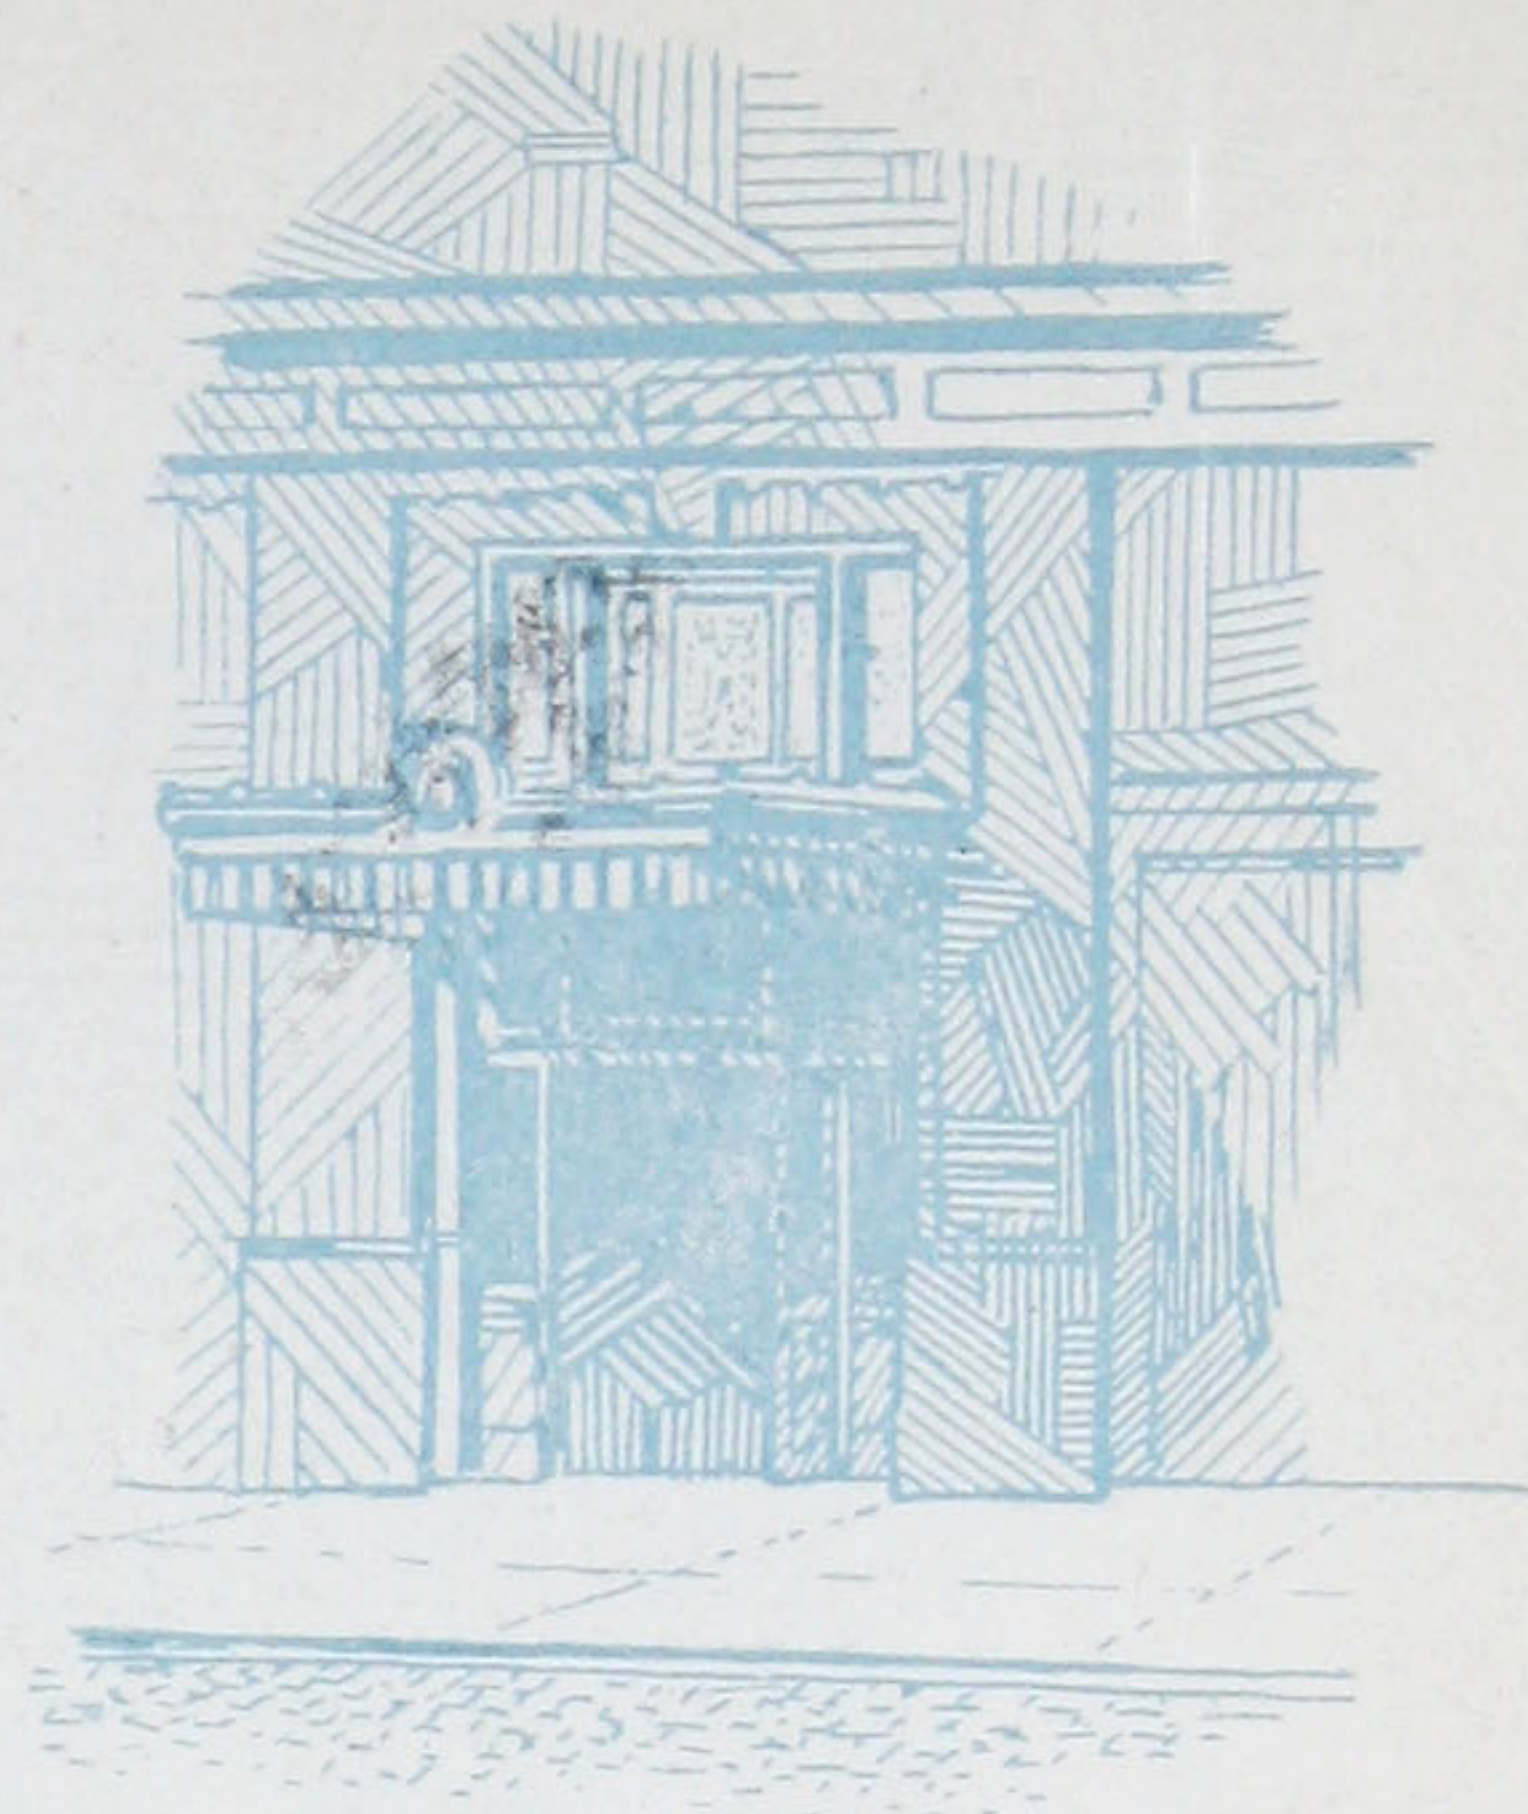

I have used two Little Wonder Concrete Mixers in the construction of many buildings in the past four years and have found them very satisfactory in every way.

The cost of upkeep has been extremely low, and I find these machines convenient in mixing mortar for Brick layers and Plasterers. They make the work easier and better.

One of these buildings is the Telephone Building, formally known as Monroe Court, 15th & M St. N.W.

Yours truly,

J. E. Fox.

Gentlemen:-

In answer to your inquiry as to how our little Wonder mixers are working. We can cheerfully recommend them for Hard wall plaster and all kinds of cements, as we have used them for a number of buildings, such as, hardwall for the Meridian Apartment, all the temporary Government buildings 6 & 7th Sts., and 14th & Ohio Ave., Washington, D. C., both inside and out with the best of success.

We believe the Little Wonder Mixer to be the best mixer for the plasterer on the market today.

Very truly yours,

MURRAY BROTHERS

W. J. McCLURE
BRICKLAYER

1449 Clifton Street, N. W.
WASHINGTON, D. C.

Mr. C. D. Pierce:

Dear Sir:

October 2nd, 1919.

In answer to yours of October the 1st, will state that I have used the Little Wonder Mixer for the past six or seven years, both the Little Wonder five and the Little Wonder Ten, on some of the largest buildings in Washington and wouldn't be without them.

I now have five of them and use them on all the work I do, both large and small jobs. They pay on any kind of work.

On the first building a new man broke the axle on the mixer, and it took six men to do what I was doing with two with the mixer, until I got it fixed and then the six men didn't make the mortar equal to the two with the mixer.

I have built the Walker Johnston building at 18th and New York Ave., the Truesdale Apartment House, 20th and Kalorama Ave. N. W., the Lansburg Store, 8th. between D and E Sts. N. W., The Southern Railroad Building on Penn Ave., & 13th Sts. N. W., the Harington Hotel at Eleventh and E Sts., N.W., all nine-story buildings; and many others and used the mixers on them all.

If any of your customers want reference, refer them to me.

Very truly yours

W. J. McClure
